
Title: Epithelial – to - Mesenchymal Transition in Cancer

Proposal

In the past several years numerous studies have examined the role of Epithelial-to-Mesenchymal (EMT) in various cancers. EMT has been shown to play a pivotal role in the trans-differentiation of epithelial to mesenchymal cells not only during embryonic development but also in cancer metastasis. In this special issue we would like to reinstate the discussion on the role of EMT particularly in cancer. We would like to invite scientists to contribute to this special issue insights and opinions which may advance our understanding of this crucial process.

Potential topics include, but are not limited to:

1. CANCER AND METASTASIS
2. EMT AND CANCER
3. TGF- β 1 AND CANCER
4. MIGRATION AND INVASION
5. CSCs AND PLASTICITY

We would appreciate if you send us title and abstract by August 15th 2015.

Further you are requested to forward this invitation among your colleagues who are specialized in this field.

Before submission of full manuscript the authors should carefully read the journal's Author Guidelines, which are located at <http://www.lifescienceglobal.com/publish-with-us/guidelines-for-authors>.

JAO intends to elaborate this Special Issue by the end of August 2015.
